FEKETE VIKTOR
Web Developer

A former back-end developer with a recently formed enthusiasm towards front-end. I'm currently looking for a place where I could put my love towards creating things to a good use.

Projects
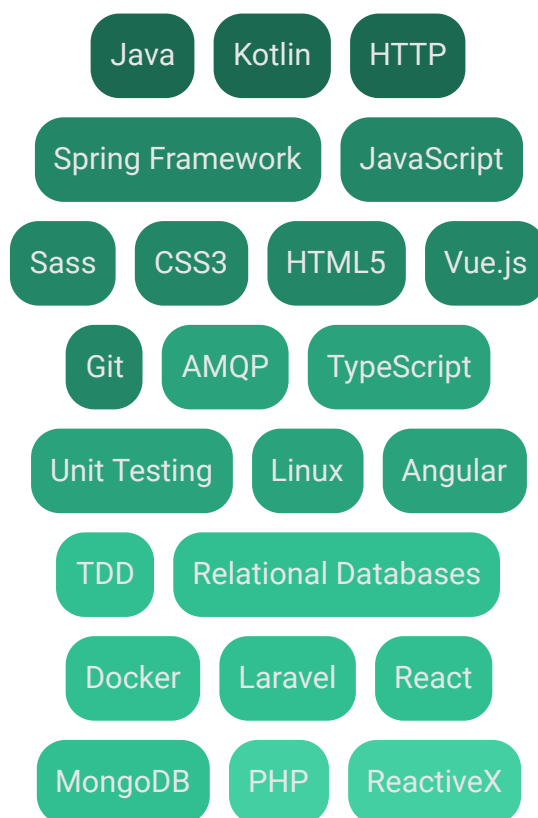

SuperStronger (07/2018 - present)

SuperStronger is an experiment aimed towards helping people counsciously and effectively control their own habits. At the current stage of the project the main goal is to change habits related to weight, such as eating end exercising.

My contributions:

- Developing the back-end using Kotlin and Spring Boot
- Implementing OAuth login using Spring Security and the Facebook API
- Creating a front-end using Angular 6 (TypeScript)
- Implementing a group chat application using WebSocket + Stomp
- Implementing payment using Barion as backend
- Building a basic infrastructure on AWS

Technical Skills

A color coded list of technologies I have experience with. The darker the color the more confident I am with the given tech.

Java Kotlin HTTP

Spring Framework JavaScript

Sass CSS3 HTML5 Vue.js

Git AMQP TypeScript

Unit Testing Linux Angular

TDD Relational Databases

Docker Laravel React

MongoDB PHP ReactiveX

Yngage (01/2018 - present)

An employee satisfaction survey service specifically targeting the "Y" generation.

My contributions:

- Developing the back-end using Laravel
- Creating a front-end using Vue.js
- Implementing administrator functionalities for managing surveys
- Building a 🔗home page based on the client's specifications

GE Healthcare Analytics Framework (06/2016 - 03/2017)

A microservices based application for storing, combining and executing medical algorithms.

My contributions:

- Setting up the service skeletons, prototyping the service-to-service communication using AMQP
- Participating in the design and implementation of the algorithm orchestration DSL

Certifications

- Bachelor's degree in software engineering from Eötvös Loránd University, earned in 2014

- AWS associate level developer certification, earned in 2016
